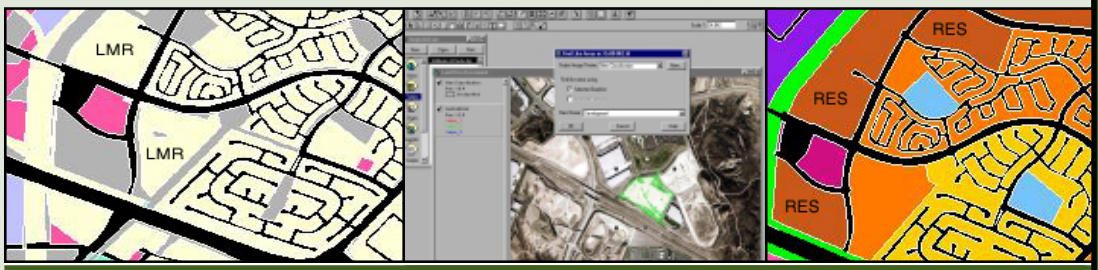
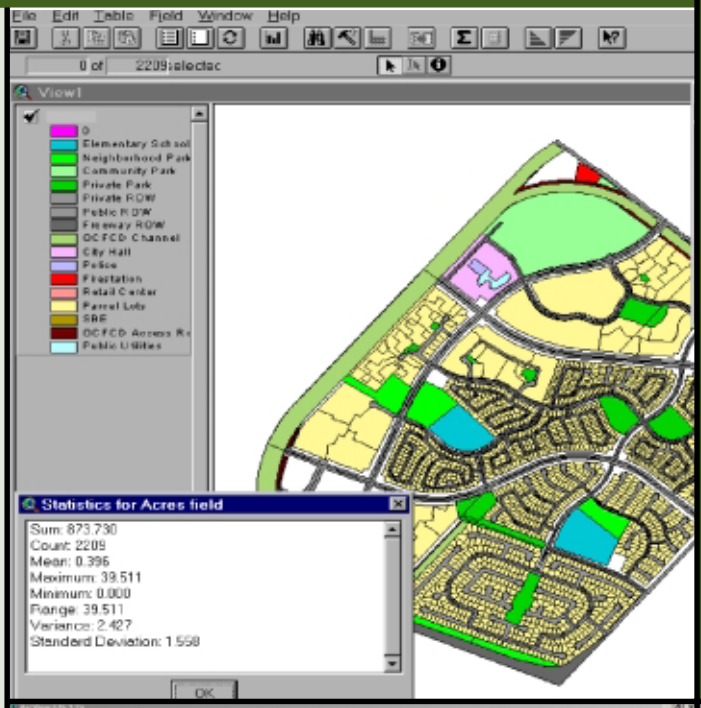
FORMA SYSTEMS

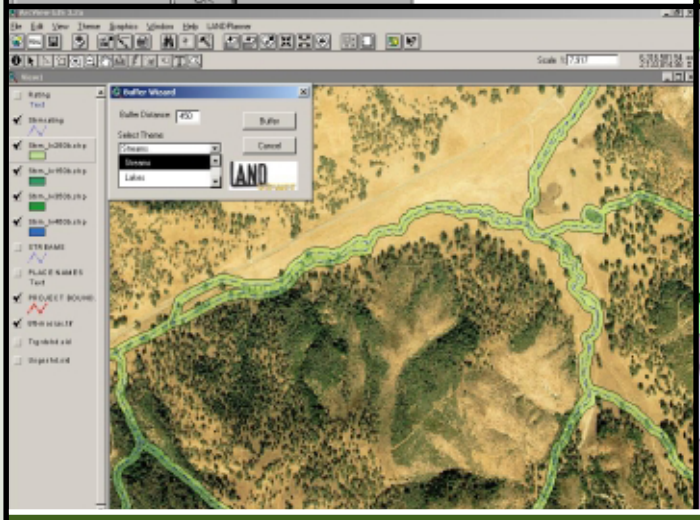
LAND Management Software

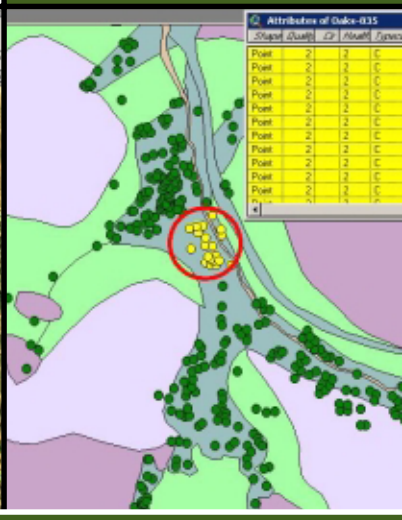


LAND Viewer

LAND Viewer is the first of three tiered management applications developed by FORMA Systems. It is a scaleable application built upon ESRI software. This is a user-friendly product that allows users to display, view, and print GIS data. The Viewer has an easy-to-use interface that catalogs and organizes the available data. LAND Viewer contains a variety of options to assist the user in denoting planning-related data. The planning professional will no longer be dependent on experienced GIS staff for map production or simple analyses. With LAND Viewer, managers will have access to sophisticated information primarily available only to technical staff with years of GIS experience.







- Land Management
- Impact Assessment
- Site Selection
- Strategic Planning
- Entitlement Assessment
- Environmental Suitability
- Mitigation Monitoring
- Modeling Scenarios
- Community Outreach
- Documentation
